SUBJECT: sweet itch allergy treatment

AREA OF CONCERN: Horse's belly

BEGINNING TREATMENT 07-13-2015

NOTES AND COMMENTS Belly of horse has seen remarkable improvement and increased hair growth. Every summer the same area suffers from sweet itch but this is the first time hair is starting to grow in that region again. Sprayed twice a day and will continue to use the gel once a day now until all hair is grown back. This has never happened before, that spot has been without much hair for the longest time, so excited about this!
