

ANIMAL BREAKTHROUGH SOLUTIONS – INFORMED CONSENT

ANIMAL BREAKTHROUGH SOLUTIONS is conducting ongoing research on ingredients of a proprietary formula, known as “HEAL-IT!” in a spray gel form. The purpose of the research is to determine the effectiveness of the formula in identifying and/or eliminating certain types of non-typical or non-performing cells in animals while reinforcing healthy cells.

FURTHER RESEARCH IS NEEDED TO VALIDATE THE COMPANY’S BELIEF THAT

1. Many non-typical or non-performing cells are not recognized as being a serious danger because the “mutated” cells contain the subject’s DNA and are masked by a protective sheath and therefore are not attacked by the immune system to an extent that it would eliminate the proliferation of these cells.
2. Ligands in our formulations are formed in an exothermic reaction between a strong acid and base that form a biological complex that binds with the Zinc and Copper ions and carries the minerals to the target area. The particular structure is called Zinc/Copper Ligands and becomes a highly efficient transport system since the ionic minerals are loosely-bounded and therefore are highly bio-available.
3. The Ligands are quickly transported across semi-permeable membranes and the free mineral ions can immediately be absorbed by diseased or healthy tissues at very low concentrations while minerals bound in salts have great difficulty reaching the target cells. The disassociation of the mineral ions in such compounds is inefficient and it takes much higher concentrations of such compounds’ without the superior results we have achieved using our system.
4. The Krebs cycle is a charting of the metabolic pathways that healthy animal cells must follow to perform all functions supporting life. There are approximately thirty-two (32) steps in the process. The steps allow for exclusion of excessive amounts of materials including minerals and other nutrients unless totally overwhelmed.
5. In summary, we believe that we are able to transport our highly available Zinc and Copper on Ligands to our target diseases (several types of non-typical, non-functioning and/or mutated cells) and kill ONLY those cells, leaving the healthy normal cells surrounding the disease, functioning without disruption.
6. Further, a sheath of cells (also non-Krebs cycle) often surrounds metastasized cells. The highly bio-available Zinc and Copper should penetrate and kill the cells within this shield, that has protected the diseased cells from detection by the immune system, and destroy that sheath. The mass of the diseased cells are then exposed to the immune system (hopefully a strong immune system) which will then join in to destroy the exposed mutated cells as well.

DESCRIPTION OF THE PROCEDURES TO BE FOLLOWED

Subjects (herein referred to as ‘you’) are required to follow the directions issued with each dose of the formula exactly. You are not allowed to sell or share this formula without written permission from the Company. General instructions will require that you apply the formula topically. In the case of skin lesions it is suggested that you place the ingredients directly on the lesion. It is recommended that you try the gel on a small area of the skin first and monitor the animal’s reaction.

PARTICIPANTS

ANIMAL BREAKTHROUGHSOLUTIONS is anxious to have participants. However, ANIMAL BREAKTHROUGH SOLUTIONS reserves the right to refuse any applicant without explanation.

EXPERIMENTAL FORMULA

These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease. ANIMAL BREAKTHROUGH SOLUTIONS procedures as well as all of the beliefs and theories associated with the formula are experimental and none of the statements of expected results or ingredients of this formula have been reviewed or approved by the FDA or any other governmental agency. The subject and his or her heirs, assigns or representatives agrees that the self-application of this formula is done at his or her own risk and agrees to hold ANIMAL BREAKTHROUGH SOLUTIONS and its Officers, Directors, Employees, Investigators, Designees, persons and/or any treated subjects who may have recommended or commented to the efficacy of the formula harmless from any legal action of any description or form.

DESCRIPTION OF POSSIBLE RISKS, REACTIONS, OBSERVATIONS OR DISCOMFORTS TO THE SUBJECT

The risk of sickness or serious illness, due to the use of this formula, is considered minimal by the company as all ingredients are considered Generally Regarded as Safe or "GRAS" under 40 CFR 180.1001 entitled the Exemption from the Requirements of a Tolerance; this regulation eliminates the need to establish a maximum permissible level of the ingredients. The components in the formulation are considered nutritional elements for plants and animals and can be found in the food we eat, the water we drink and/or the air we breathe.

Some of the ingredients are concentrated minerals that are readily expelled from the body when in excess of the normal daily intake through food and/or vitamin supplements. More research is required to develop a complete understanding of all of the possible benefits and consequences of the use of this formula.

There are no new experimental chemicals or ingredients in the formula that are considered "synthetic" drugs. This treatment or procedure may involve unknown risks to the subject which are currently unforeseeable. It is important to advise ANIMAL BREAKTHROUGH SOLUTIONS if there are any allergies and/or reactions to any natural or un-natural substances and particularly, an adverse reaction to minerals.

CONFIDENTIALITY

ANIMAL BREAKTHROUGH SOLUTIONS shall maintain the confidentiality of the individuals records and data pertaining to the subject's case and not share the information of such records except as ordered by a properly issued, lawful subpoena. The conclusions reached by collection of the total data and research will be shared with others that are deemed, by the company, to be important in validating the ANIMAL BREAKTHROUGH SOLUTIONS formula's efficacy. Testimonials including pictures showing efficacy of the formula can be used by the ANIMAL BREAKTHROUGH SOLUTIONS on its website, in advertising or any other promotional and sales materials. The subject agrees, by his/her signature below, not to disclose or discuss, to any independent third parties the proprietary formulation of the gel called "HEAL-IT!". The subject agrees not to market or duplicate the formula or name "HEAL-IT!" or pass any of the formula or its components to any other person with the intent to duplicate or re-create the formula, its components or the name "HEAL-IT!".

NO COMPENSATION WILL BE PAID BY ANIMAL BREAKTHROUGH SOLUTIONS

Participation is voluntary and refusal to participate will involve no penalty. The subject may discontinue participation at any time. Subjects are not paid any compensation for their participation. ANIMAL BREAKTHROUGH SOLUTIONS appreciates your help in validating the efficacy of the formula and will be pleased to hear of your experience. No compensation is given for testimonials or photos used by ANIMAL BREAKTHROUGH SOLUTIONS for promotional purposes. Studies that are conducted by ANIMAL BREAKTHROUGH SOLUTIONS personnel and/or designees are not considered "clinical" studies and may or may not be of value to the FDA in considering a registration of the formula. All studies are valuable as research and each subject treated contributes to a better understanding of the formula's benefits.

THE APPROXIMATE NUMBER OF SUBJECTS INVOLVED IN THE STUDY

The study is scheduled to continue on through the year 2015. The number of participants is uncertain.

FEDERAL REGULATIONS

This Informed Consent requirement is not intended to pre-empt any applicable Federal, State, or local laws which require additional information to be disclosed for informed consent to be legally effective.
